Preview alternatives for visualizing final granular balls in frozen GRACE-H space

A Current: max-radius circles

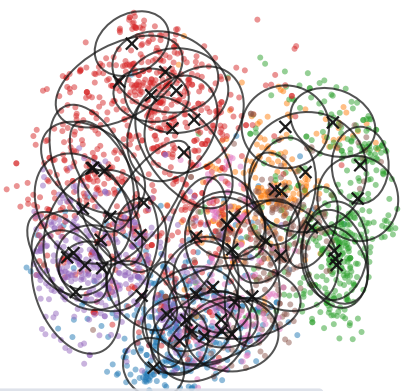

all 52 final balls; sensitive to projected outliers

B Robust: 80% quantile circles

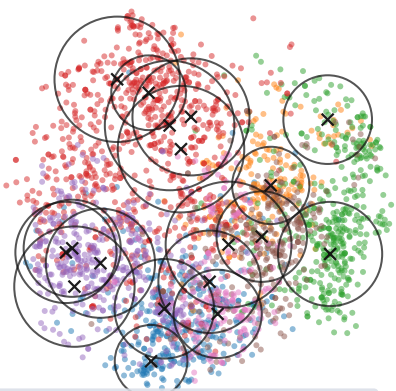

all 52 final balls; outlier-resistant visual contour

C Shape-aware: covariance ellipses

all 52 final balls; follows local projected anisotropy

D Sparse: representative balls

18 largest final balls only; explanation figure, not full cover

All panels use the same final Cora balls from the current algorithm; only the drawing convention changes.
